

4.25"

11"

We recommend that you grow this tree in a container until it is 2 to 4 feet tall, and then transplant it to a permanent location in the landscape. First, fill a 3 to 5 gallon container (or larger if you wish) with well-draining planting soil. Dig a hole for your seedling, approximately 3 inches in diameter and 8 inches deep. Place your seedling's root plug into the hole, and fill in soil snugly around the roots. The top of the root plug should be just below the surface. Water well, and place the tree in a sunny, outdoor location. Always water your tree thoroughly, but be careful not to over-water by watering too frequently—allow the soil in the root zone to become almost dry between deep waterings. Your tree will enjoy any high nitrogen plant food; 20-20-20 is a good nutrient mix. Good luck, have fun, and thank you for planting this tree!

Jonsteen Kraft Bag Seedling Custom Label Template

Full bleed/color okay

Our custom kraft bag labels come with a ton of helpful information and instructions built in, as well as Jonsteen's Tree Help Line for growing questions.

This template offers a **3.25" x 3.25"** design space to make entirely your own. All we need from you is a hi-res art file (PDF or AI files are preferred, but high quality JPG and PNG files will also be accepted).

[Please send art file and/or questions to customersupport@jonsteen.com]
