**PLANT ME!**  
  
**GROW ME!**

We recommend that you grow this tree in a container until it is 2 to 4 feet tall, and then transplant it to a permanent location in the landscape. First, fill a 3 to 5 gallon container (or larger if you wish) with well-draining planting soil. Dig a hole for your seedling, approximately 3 inches in diameter and 8 inches deep. Place your seedling's root plug into the hole, and fill in soil snugly around the roots. The top of the root plug should be just below the surface. Water well, and place the tree in a sunny, outdoor location. Always water your tree thoroughly, but be careful not to over-water by watering too frequently – allow the soil in the root zone to become almost dry between deep waterings. Your tree will enjoy any high nitrogen plant food; 18-15-15 is a good nutrient mix. Good luck, have fun, and thank you for planting this tree!

THIS TREE IS 100% GUARANTEED FOR LIFE! IF IT DOES NOT SURVIVE [FOR ANY REASON], WE'LL REPLACE IT FREE [YOU PAY ONLY SHIPPING & HANDLING].
